Investment objective

Vanguard Global Aggregate Bond Index (Hedged) ETF seeks to track the return of the Bloomberg Global Aggregate Float-Adjusted and Scaled Index hedged into Australian dollars before taking into account fees, expenses and tax.

ETF overview

The ETF provides low cost exposure to high-quality, income-generating securities issued by governments, government-owned entities, government-guaranteed entities, investment-grade corporate issues and securitised assets from around the world. The investments in the ETF are predominantly rated BBB- or higher by Standard & Poor's or equivalent ratings agency. The ETF is hedged to Australian dollars so the value of the ETF is relatively unaffected by currency fluctuations.

Performance return^{A,B,C,E} (%)

Quarter ended	Amount (CPU)	Reinvestment price
31 December 2023	19.4431	\$41.9044

Notes

- ^A Past performance is not an indication of future performance.
- ^B Returns assume reinvestment of all distributions. Returns for periods longer than 1 year are annualised. ETF gross returns are before management fees and taxes, but after transaction and operational costs. ETF total return is the ETF gross return less management fees. Index returns do not allow for taxes, management, transaction and operational costs.
- ^C Returns assume that an investor purchased units at Net Asset Value (NAV) and does not reflect the transaction costs imposed on the creation and redemptions of ETF Units, brokerage or the bid ask spread that investors pay to buy and sell ETF securities on the Australian Securities Exchange.
- ^D Past distributions are not an indication of future distributions.
- ^E Prior to 1 April 2019, the Fund's benchmark was the Bloomberg Barclays Global Aggregate Float-Adjusted Index hedged into Australian dollars.
- ^F For a full breakdown of the management fees and costs, please refer to the "Fees and costs summary" section of the PDS.

Glossary

Yield to maturity is the rate of return an investor would receive if the fund's fixed income securities were held to their maturity dates.

Weighted average coupon is the average interest rate (coupon rate) of all the bonds in a fund.

Weighted average maturity is the time from today until a bond matures or is redeemed by its issuer. Within a portfolio, the statistic is calculated for each bond and weighted by each bond's market value. In general, the longer a fund's average weighted maturity, the more its unit price will fluctuate in response to changing interest rates.

Weighted average credit quality is an indicator of credit risk. This figure is the average credit ratings assigned to a fund's holdings by credit rating agencies. Agencies assign credit ratings after appraising an issuer's ability to meet its obligations. Quality is graded on a scale, with Aaa or AAA indicating the most creditworthy bond issuers.

Effective duration is an option-adjusted measure of a portfolio's sensitivity to a change in interest rates. For example, if a bond has a duration of two years, its price would fall about 2% when interest rates rose one percentage point. On the other hand, the bond's price would rise by about 2% when interest rates fell by one percentage point.

Running yield for an individual bond is the annual dollar interest payment (coupon) of the bond divided by its market price. Within a portfolio, the statistic is calculated for each bond and weighted by each bond's market value.
