

Vanguard U.S. Quality Factor ETF | VFQY

As of December 31, 2025

Investment approach

- Advisor uses a rules-based quantitative model to evaluate U.S. common stocks.
- Fund invests in stocks with strong fundamentals.
- The portfolio includes a diverse mix of stocks representing many different market capitalizations (large, mid, and small), market sectors, and industry groups.
- Portfolio companies may exhibit strong profitability and healthy balance sheets.
- Seeks long-term capital appreciation.
- Typically, at least 80% of the fund's assets will be invested in securities issued by U.S. companies.
- Note: The Quality factor is measured by operating profitability, gross profitability, change in net operating assets, intangibles intensity (for non-financial stocks); operating profitability, equity issuance (for financial stocks).

About the benchmark

- The Russell 3000 Index measures the performance of the largest 3,000 companies representing approximately 98% of the investable U.S. equity market.
- The index is constructed to provide a comprehensive, unbiased, and stable barometer of the broad market and is reconstituted annually to ensure new and growing equities are included.

Performance history

Total returns ² for period ended December 31, 2025

VFQY (Inception 2018-02-13)	Quarter	Year to date	1 year	3 years	5 years	Since inception
Net asset value (NAV) return ³	2.25%	10.30%	10.30%	15.12%	10.49%	11.03%
Market price return ⁴	2.04	10.24	10.24	15.09	10.45	11.01
Russell 3000 Index	2.40	17.15	17.15	22.25	13.15	13.95

The performance data shown represent past performance, which is not a guarantee of future results. Investment returns and principal value will fluctuate, so investors' shares, when sold, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data cited. For performance data current to the most recent month-end, visit our website at vanguard.com/performance. The performance of an index is not an exact representation of any particular investment, as you cannot invest directly in an index.

ETF attributes

	U.S. Quality Factor ETF	Russell 3000 Index
Number of stocks	413	2,966
Median market cap	\$27.1B	\$276.9B
Price/earnings ratio	21.0x	27.3x
Price/book ratio	4.0x	4.6x
Return on equity	26.5%	23.8%
Earnings growth rate	15.6%	22.0%
Turnover rate ⁵	44.1	—
Standard deviation ⁶	14.20%	12.54%

1. As reported in the most recent prospectus. A fund's current expense ratio may be lower or higher than the figure reported in the prospectus.

2. Figures for periods of less than one year are cumulative returns. All other figures represent average annual returns. Fund performance figures assume the reinvestment of dividends and capital gains distributions; the figures are pre-tax and net of expenses. The above widely used comparative index represents unmanaged or average returns on various financial assets that can be compared with the fund's total returns for the purpose of measuring relative performance.

3. As of 4 p.m., Eastern time, when the regular trading session of the New York Stock Exchange typically closes.

4. Effective July 15, 2024, the market price returns are calculated using the official closing price as reported by the ETF's primary exchange. Prior to July 15, 2024, the market price returns were calculated using the midpoint between the bid and ask prices as of the closing time of the New York Stock Exchange (typically 4 p.m., Eastern time). The returns shown do not represent the returns you would receive if you traded shares at other times.

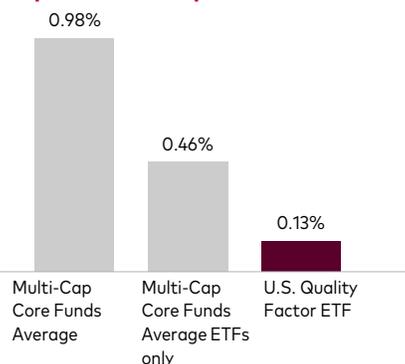

5. For most recent fiscal year. Turnover rate excludes the value of portfolio securities received or delivered as a result of in-kind purchases or redemptions of the fund's capital shares, including Vanguard ETF Creation Units.

6. A measure of the volatility of a fund—based on the fund's last three years of monthly returns—used to indicate the dispersion of past returns. A higher standard deviation means a greater potential for volatility. For funds with less than 36 months of performance history, standard deviation is not calculated.

Basic Materials	1.7
Energy	1.7
Telecommunications	0.8
Real Estate	0.0
Utilities	0.0
Other	0.0

1. Represents the expense ratio for the Vanguard ETF as reported in the most recent prospectus. There are material differences between mutual funds and ETFs. Unlike mutual funds, ETFs are priced continuously and bought and sold throughout the day in the secondary market (at a premium or discount to net asset value) with the assistance of a stockbroker, which entails paying commissions. Sources: Lipper, a Thomson Reuters Company, and Vanguard, December 31, 2024.

2. The holdings listed exclude any temporary cash investments and equity index products.

3. Sector categories are based on the Industry Classification Benchmark system ("ICB"), except for the "Other" category (if applicable), which includes securities that have not been provided an ICB classification as of the effective reporting period.

Vanguard ETF® shares are not redeemable with the issuing fund other than in very large aggregations worth millions of dollars. Instead, investors must buy or sell Vanguard ETF shares in the secondary market and hold those shares in a brokerage account. In doing so, the investor may incur brokerage commissions and may pay more than net asset value when buying and receive less than net asset value when selling.

All ETF products are subject to risk, which may result in the loss of principal.

The Factor Funds are subject to investment style risk, which is the chance that returns from the types of stocks in which a Factor Fund invests will trail returns from U.S. stock markets. The Factor Funds are also subject to manager risk, which is the chance that poor security selection will cause a Factor Fund to underperform its relevant benchmark or other funds with a similar investment objective, and sector risk, which is the chance that significant problems will affect a particular sector in which a Factor Fund invests, or that returns from that sector will trail returns from the overall stock market.
