Ongoing Charges Figure[†] 0.05%

[†] The Ongoing Charges Figure (OCF) covers administration, audit, depository, legal, registration and regulatory expenses incurred in respect of the Funds. When you invest with any fund manager, you pay a number of charges, starting with the Annual Management Charge (AMC) which covers the fund manager's costs of managing the fund. The AMC plus ongoing running costs and other operational expenses make up the fund's total 'ongoing charges figure'.

Objectives and investment policy

- The Fund employs a passive management – or indexing – investment approach, through physical acquisition of securities, and seeks to track the performance of the Bloomberg US Treasury 3-7 Year Index (the "Index").
- The Fund invests in a portfolio of fixed-rate, 3-7 Year US Dollar- denominated US Treasury securities that so far as possible and practicable consists of a representative sample of the component securities of the Index.
- The Index is designed to reflect the universe of US Dollar-denominated, fixed rate, nominal debt issued by the US Treasury with maturities of between three and up to, but not including, seven years and which have a par amount (i.e. the amount of money that issuers agree to repay to the purchaser at the bond's maturity) outstanding greater than or equal to USD300 million.
- To a lesser extent the Fund may invest in similar types of government bonds outside the Index.
- The Fund attempts to remain fully invested except in extraordinary market, political or similar conditions where the Fund may temporarily depart from this investment policy to avoid losses.
- While the Fund is expected to track the Index as closely as possible, it typically will not match the performance of the targeted Index exactly, due to various factors such as expenses to be paid by the Fund and regulatory constraints. Details of these factors and the anticipated tracking error of the Fund are set out in the Prospectus.
- Information on the Fund's portfolio can be found at <https://www.ie.vanguard/products>. The Indicative Net Asset Value for the Fund is calculated throughout the trading day and is published on Bloomberg or Reuters.

Performance summary

USD—Vanguard U.S. Treasury 3-7 Year Bond UCITS ETF

Benchmark – Bloomberg U.S. 3-7 Year Treasury Index

Sorry, the fund information is not available yet. This will appear after one year from the date of its creation.

Vanguard U.S. Treasury 3-7 Year Bond UCITS ETF

USD Dist - An exchange-traded fund

Data as at 28 February 2026 unless otherwise stated.

Characteristics

	Fund	Benchmark
Number of bonds	87	91
Yield to worst	3.53%	3.53%
Average coupon	3.3%	3.3%
Average maturity	4.8 years	4.8 years
Average quality	AA+	AA+
Average duration	4.4 years	4.3 years
Cash investment*	-0.2%	-

Market allocation

United States	100.2%
Other	-0.2

Distribution by credit maturity (% of fund)

Distribution by credit quality (% of fund)

Credit-quality ratings for each issue are obtained from Bloomberg using ratings derived from Moody's Investors Service, Fitch Ratings and Standard & Poor's. When ratings from all three agencies are available, the median rating is used. When ratings are available from two of the agencies, the lower rating is used. When one rating is available, that rating is used.

Distribution by issuer (% of fund)

*The allocations are subject to circumstances such as timing differences between trade and settlement dates of underlying securities, that may result in negative weightings. The fund may also employ certain derivative instruments for cash management or risk management purposes that may also result in negative weightings. Allocations are subject to change. Cash includes physical cash on the account, cash like instruments (such as ultra-short term treasury bonds) and derivative instruments.

Glossary for ETF attributes

The ETF attributes section on the first page contains a number of metrics that professional investors use to value individual securities against a market or index average. These metrics can also be used to value and compare funds to the market by taking the average of all the securities held in the fund and comparing them to those of the fund's benchmark index. We've provided a definition of the terms used for your convenience.

Average coupon is the average interest rate paid on the fixed income securities held by a fund. It is expressed as a percentage of face value.

Average maturity is the average length of time until fixed income securities held by a fund reach maturity and are repaid, taking into consideration the possibility that the issuer may call the bond before its maturity date. The figure reflects the proportion of fund assets represented by each security; it also reflects any futures contracts held. In general, the longer the average effective maturity, the more a fund's share price will fluctuate in response to changes in market interest rates.

Average quality is an indicator of credit risk. This figure is the average of the ratings assigned to a fund's fixed income holdings by credit-rating agencies. The agencies make their judgment after appraising an issuer's ability to meet its obligations. Quality is graded on a scale, with Aaa or AAA indicating the most creditworthy bond issuers.

Average duration is an estimate of how much the value of the bonds held by a fund will fluctuate in response to a change in interest rates. To see how the value could change, multiply the average duration by the change in rates. If interest rates rise by 1 percentage point, the value of the bonds in a fund with an average duration of five years would decline by about 5%. If rates decrease by a percentage point, the value would rise by 5%.

Yield to worst applies when the portfolio is invested into callable bonds. When it is not the case Yield to worst=Yield to maturity.

All investing is subject to risk, including possible loss of principal. Bond funds are subject to the risk that an issuer will fail to make payments on time, and that bond prices will decline because of rising interest rates or negative perceptions of an issuer's ability to make payments. Funds that concentrate on a relatively narrow market sector face the risk of higher share-price volatility.

Vanguard ETF® Shares are not redeemable with the issuing Fund other than in very large aggregations worth millions of dollars. Instead, investors must buy or sell Vanguard ETF Shares in the secondary market and hold those shares in a brokerage account. In doing so, the investor may incur brokerage commissions and may pay more than net asset value when buying and receive less than net asset value when selling.

The Central Bank of Ireland has granted authorisation for the Vanguard U.S. Treasury 3-7 Year Bond UCITS ETF to invest up to 100% of net assets in different Transferable Securities and Money Market Instruments issued or guaranteed by any EU Member State, its local authorities, non-EU Member States or public international bodies of which one or more EU Member States are members. The Vanguard U.S. Treasury 3-7 Year Bond UCITS ETF invests more than 35% of its scheme property in transferable securities and money market instruments issued or guaranteed by the US.

Important Information

Shares of the Funds are only available for certain non-U.S. persons in select transactions outside the United States, or, in limited circumstances, otherwise in transactions which are exempt in reliance on Regulation S from the registration requirements of the United States Securities Act of 1933, as amended and such other laws as may be applicable. This document does not constitute an offer to subscribe for shares in the Fund. This document should not be provided to retail investors in the United States. In the United States, this document is directed at professional/ sophisticated investors and is for their use and information. The offering or sale of Fund shares may be restricted in certain jurisdictions.

All investing is subject to risk, which may result in loss of principal. Be aware that fluctuations in the financial markets and other factors may cause declines in the value of your account. There is no guarantee that any particular asset allocation or mix of funds will meet your investment objectives or provide you with a given level of income. Prices of mid- and small-cap stocks often fluctuate more than those of large-company stocks. Investments in stocks or bonds issued by foreign companies are subject to risks including country/regional risk and currency risk. These risks are especially high in emerging markets. Funds that concentrate on a relatively narrow market sector face the risk of higher share-price volatility. It is possible that tax-managed funds will not meet their objective of being tax-efficient.

Investments in bond funds are subject to the risk that an issuer will fail to make payments on time, and that bond prices will decline because of rising interest rates or negative perceptions of an issuer's ability to make payments. High yield bonds generally have medium- and lower-range credit-quality ratings and are therefore subject to a higher level of credit risk than bonds with higher credit-quality ratings. Although the income from a municipal bond fund is exempt from U.S. federal tax, you may owe taxes on any capital gains realized through the fund's trading or through your own redemption of shares. For some investors, a portion of the fund's income may be subject to state and local taxes, as well as to the U.S. federal Alternative Minimum Tax. Diversification does not ensure a profit or protect against a loss.

The information contained herein does not constitute tax advice, and cannot be used by any person to avoid tax penalties that may be imposed under the Internal Revenue Code. Each person should consult an independent tax advisor about his/her individual situation before investing in any fund or ETF.
